Winter Semester 2016/17

-

19.02.2016

1st Study Section

Module Titel			CP	P	WL	Assessment Method	Suggested semester
3100000	Module P1	Interdisciplinary Project 1	10	90	300	Module examination(s)	1 - 2

Module Director: **Wolfgang Schlieszus, Prof. Jochen Stenschke, Prof. Dr. Ralf Rummel-Suhrcke**

Level: **Basic Module**

Entry requirements: -

Cycle: **Two times yearly**

S#	Title of Subject	Lecturer	CP	CH	Relevance	Type of Course	Assessment Method (-/- means -or-)	Grading
3121000	Interdisciplinary project 1	Versch.	5	40	C	Project	Participation	-
3122000	Performative aesthetics / Artistic research	Schm, NN	3	30	C	Scientific seminar	Participation	-
3123000	Presentation and documentation techniques	Versch.	2	20	C	Theory-practice seminar	Participation	-
3130000	Module examination: Portfolio	-	-	-	C		Presentation of results	-

Learning objectives in Module P1

Goal:

The students are able to independently work on a given aesthetic assignment and present the results. They have the ability to reflect upon their experiences made during the project. They possess fundamental skills and knowledge regarding the documentation and description of aesthetic processes.

Content:

The students' studies begin with a project week which they work in small groups on a concrete aesthetic question. They are supervised and accompanied by tutors (in the form of co-teaching) and students who are in the main study period. Subsequently they are introduced to presentation and documentation techniques and create a portfolio. They are introduced to the main features of performative aesthetics and artistic research.

Learning objectives in Module P2

Goal:

The students are able to apply their so far acquired artistic knowledge and skills to a concrete artistic interdisciplinary project work. They are capable of independently conceptualising, implementing and presenting an artistic interdisciplinary project in small groups across courses. They are able to reflect upon their artistic work in connection to their project based seminar content. They can apply different perspectives to their artistic work. They understand the fundamental steps of planning, implementation and documenting project results. At the meeting point between the arts and the, for their respective studies, relevant science, the students possess media skills.

Content:

The students prepare a concrete artistic interdisciplinary project with the help of different artistic forms and media. They are accompanied by tutors in the form of co-teaching. They describe and document their project and reflect it in the light of project-specific theory models and fundamental thoughts regarding project management.

Learning objectives in Module F1

Goal:

The students become acquainted with different professional perspectives in subsequent occupational fields. They have the ability to reflect more deeply upon their artistic and scientific experiences and knowledge. They are able to reflect upon their vocational orientation from an interdisciplinary perspective. They learn to deal with artistic processes and with relevant scientific sources for their respective field of study and with the help of this are able to process a concrete question.

Content:

The encouragement of artistically and scientifically based reflection stands at the centre of module F1. Different artistic and scientific possibilities of insight into contemporary society and the problematic dimensions of the human self-conception are applied to one another. The students' ability to reflect is schooled in the view of aesthetic perception and their power of judgement. The module conveys theoretical and methodical foundations in art and science which go above and beyond the borders of their respective professional disciplines. It helps school the approach to complex communicative processes and helps the student acquire communicative skills regarding different social fields. At the beginning of the semester the students are able to choose a scientific support subject which is relevant to their respective field of study. Subjects within the framework of fundamentals of study are for instance: Interpretational models based on art theory, phenomenology of perception, art and perceptual psychology, learning and teaching models.

Learning objectives in Module P3

Goal:

The students have the ability to implement, accompany and instruct a concrete artistic project work. They are able to evaluate project based processes and found it in light of theoretic models of artistic research. Furthermore, they are able to convey their findings in a professional manner. They possess professional media skills at the meeting point between their field of study and the sciences relevant for their respective field of study, especially educational science.

Content:

The students accompany the primary project in module P1. They instruct their fellow students regarding concrete aesthetic project connections and help implement the projects. They document and evaluate the project and present their results in the form of a portfolio. They are hereby supported by different tutors in the form of co-teaching.

Learning objectives in Module F3

Goal:

The students become acquainted with different professional perspectives in subsequent occupational fields. They have the ability to reflect upon and understand their artistically and scientifically orientated learning processes. They are able to reflect upon their vocational orientation from an interdisciplinary perspective. They are able to confidently work with different sources and process a concrete question with the help of founded methods. They are able to pose their question in their specific field of study and convey this to a professional audience.

Content:

The encouragement of artistically and scientifically based reflection stands at the centre of module F1. Possibilities of insight into artistic and scientific specialisations, complex questions regarding contemporary society and the problematic dimensions of the human self-conception are applied to one another. The students' ability to reflect is schooled in the view of aesthetic perception and their power of judgement. The module conveys theoretical and methodical foundations in art and science which go above and beyond the borders of their respective professional disciplines. It helps school the approach to complex communicative processes and helps the student acquire communicative skills regarding different social fields. At the beginning of the semester the students are able to choose a scientific support subject which is relevant to their respective field of study. Subjects within the framework of fundamentals of study are for instance: sociological questions regarding contemporary culture, art philosophy, ...

Learning objectives in Module I

Goal:

This module enables the students to develop an individual profile in sight of their specific professional orientation. The students are able to choose a major field of study with the following goals in mind; personality development and professional orientation. This module helps develop the students' mobility in which the credit points acquired abroad are taken into account.

Content:

In this module lectures out of different study courses are summarised into profiled lectures to help enable students who wish to change their course of study to specifically focus on skills in sight of their preferred degree or to help the transition into the master degree course; "Art and Theatre in a Social Context". Besides the extracurricular courses there are subjects such as: project and cultural management, anthroposophically orientated art therapy, visual media in theatre work, study trips.
